About

I'm a Java Backend Engineer with 5+ years of experience building and owning production backend services using Java, Spring Boot, REST APIs, and microservices architecture.

At HP Inc. in the United States, I progressed from implementing backend features to independently owning microservices, participating in architecture decisions, and managing production releases for subscription management and payment processing platforms.
My experience includes modernizing services from Java 8 to Java 21, building event-driven integrations using Kafka and RabbitMQ, improving database performance, and deploying containerized applications on AWS.

Technical Expertise
• Backend: Java 8/21, Spring Boot, REST APIs, Microservices
• Distributed Systems: Apache Kafka, RabbitMQ, Event-Driven Architecture
• Cloud & DevOps: AWS ECS, Docker, Jenkins, Azure DevOps, CI/CD
• Databases: PostgreSQL, MySQL, MongoDB, JPA/Hibernate
• Testing: JUnit, Mockito, Testcontainers, Integration Testing

Selected Contributions
• Helped reduce payment transaction failures by 40% through resilient API integrations and retry mechanisms.
• Reduced deployment cycle times by 50% through CI/CD improvements.
• Contributed to automated testing efforts that achieved 95% code coverage.

I enjoy solving backend engineering challenges involving distributed systems, application performance, system design, and production reliability.

I'm currently exploring Java Backend Engineer, SDE 2, Software Engineer II, and Senior Software Engineer opportunities across India, including Hyderabad.

Open to connecting with recruiters, hiring managers, and engineering teams building scalable backend systems.

Software Engineer

HP

Apr 2021 - Jan 2026 · 4 yrs 10 mos

Vancouver, Washington, United States · Hybrid

Worked on backend microservices supporting subscription lifecycle management and payment processing using Java, Spring Boot, and cloud technologies.

Key responsibilities and contributions:
• Progressed from feature development to independently owning Java and Spring Boot microservices supporting subscription upgrades, downgrades, cancellations, and payment processing, including technical design decisions and production releases.
• Contributed to modernizing services from Java 8 to Java 21, using modern language features to reduce code complexity and improve maintainability.
• Implemented event-driven integrations using Apache Kafka and RabbitMQ to decouple subscription and billing services.
• Integrated third-party payment gateway APIs with retry mechanisms, contributing to a 40% reduction in transaction failures and 99.9% uptime.
• Automated CI/CD processes using Jenkins and Azure DevOps for Docker-containerized applications deployed on AWS ECS, reducing deployment cycle times by 50%.
• Improved SQL and MongoDB query performance through indexing, aggregation pipelines, and database optimization.
• Developed unit and integration tests using JUnit, Mockito, and Testcontainers, helping achieve 95% code coverage.
• Owned production support and reliability for Java and Spring Boot microservices, investigating incidents, debugging application failures, identifying root causes, and coordinating fixes and production releases to restore service stability and prevent recurring issues.

Tech Stack: Java 8/21, Spring Boot, REST APIs, Microservices, Apache Kafka, RabbitMQ, AWS ECS, Docker, Jenkins, Azure DevOps, SQL, MongoDB, JUnit, Mockito, Testcontainers.

Thrivent

Sep 2020 - Jan 2021 · 5 mos

Minneapolis, Minnesota, United States · Remote

• Developed backend microservices using Java and Spring Boot, building RESTful APIs to support

business operations and service-to-service communication.
• Implemented data persistence layers using Spring Data JPA and Hibernate, enabling efficient database interactions and maintainable data access.
• Developed event-driven integrations using Apache Kafka to facilitate asynchronous communication between distributed backend services.
• Implemented exception handling, Spring Boot security features, and unit and integration tests to improve application reliability, code quality, and maintainability.

Education

The University of Texas at Arlington
Master's Degree, Computer Science
Aug 2018 – May 2020

BV Raju Institute of Technology (BVRIT)
Bachelor of Technology, Electrical, Electronics and Communications Engineering
Sep 2014 – Mar 2018
